July 2021

Gino Choucair,
Managing Director
IT Genie.

Our Mission: To help align your technology to support your business growth.

From our HQ in the heart of the Gatwick Diamond we support businesses through their challenges and build the right solutions to enable them to succeed.

Take Your Business To The Next Level With These Technology Solutions

Take Your Business To The Next Level With These Technology Solutions

When you set goals for your business this year, there's a good chance one of those goals was tied to growth. It's a common goal. You have your eyes set on acquiring new customers. You're ready to take their business to the next level. The challenge, however, is getting to that next level. If you do a web search on how to grow your business, you'll find more results than you know what to do with. It can be frustrating and overwhelming.

This month, we're here to take away some of that frustration and share a few ideas on how you can use technology solutions to put

together a growth strategy that works for your business, its needs and *your* overall goals. There are four areas where technology really shines: automation, access, engagement and security.

Automation

There are automation tools that assist with everything from invoicing to customer service. One great example is the chatbot. Thanks to major strides in artificial intelligence (AI), chatbots are more useful than ever. All you have to do is plug one into your website, and it can handle a surprising amount of customer service issues. It can even direct customers and leads to real humans within your organization. When you can direct leads accordingly, it makes it easier to

Continued on pg.2

Continued from pg.1

track and follow up with those leads, possibly increasing your sales and growth.

Access

Thanks to the cloud, you have the potential to access virtually any part of your business from anywhere, including your employees. This makes the remote work model (as well as the hybrid model) much easier to implement. Plus, if you back up critical data to the secure cloud on a regular basis, you never have to worry about losing that critical data. But the truly great thing about the cloud is that it's automatically scalable and fully customizable. The cloud grows with you, which means you save serious money when you're no longer bound to traditional models of scaling.

Engagement

It may be wedding season, but we're not talking about a "wedding bells" marriage. Technology allows you to engage with customers and leads in a way you've never been able to before. Social media

platforms especially give you tools to engage with customers. From [LinkedIn](#) to [Facebook](#), these platforms have tools to connect with specific demographics. You can post videos, share content, and simply interact with customers and your community. These kinds of things put you and your brand out there in front of new customers.

Security

We saved this one for last because it's a big one that not everyone thinks about, but it's absolutely crucial. As your business grows, your IT needs grow and change too. You need to make sure your network is ready for the challenge of growth. On top of that, you need to be sure that your employees have the tools and resources they need to keep your business secure. There are a lot of threats out there, from the internal threat of hardware failure to the external threat of malware and cybercriminals. With more business shifting to remote or a hybrid work model, your IT security needs should be top priority.

Final Thoughts

As you fold different technologies into your business, remember that you never have to do any of it on your own. If you need help or want to maximize the benefits of technologies you're using or interested in using, work closely with your managed service provider or IT partner. They are there to answer your questions and to help you optimize your business for your growth goals.

"When you can direct leads accordingly, it makes it easier to track and follow up with those leads, possibly increasing your sales and growth."

If Your Employees Can Be Rick-Rolled They Need Security Awareness (anti-Phishing) Training

Mis-directing unsuspecting recipients into watching the video of '80s sensation Rick Astley's 'Never Gonna Give You Up' has been a mainstay of the internet [since 2007](#).

Earlier this year a YouTuber [remastered NGGYU in 4K at 60fps](#) for ultimate clarity of 'bait & switch'.

But, no matter how light-hearted the premise, it highlights that if your employees can be Rick-Rolled, they can just as easily be tricked into clicking other more malicious links.

Can your employees spot a phishing email hiding in their inbox?

Meet The Geek

Ben Taylor – Service Desk Engineer

Geek or Nerd?

Geek is the closest if I had to pick

What do you do for IT Genie clients?

As a first line engineer on the IT Genie Service Desk, the problems I mainly deal with those which can get you up & running again quickly – Office 365 troubleshooting, passwords, programs not opening, slow PC's, and occasionally setting up new devices and user profiles.

Should you phone our Service Desk, I may be one of the three voices you'll speak to first. Assisting our Dispatch team to triage your issue and assign the ticket to the most appropriate Engineer to call you back ASAP!

Best advice ever given

The best tech advice I'd give someone would be: Make sure you restart your PC at the end of every day to keep it running as smoothly as possible. Lots of issues can be prevented by not having long uptimes! #TIO&OA

Most useful software

[Ninite](#) – Creates a combo package of common installers that helps speed up getting programs onto PC's such as Chrome, Adobe reader and Teams – the handy programs that most likely everyone uses!

Cannot live without gadget

My Apple Watch – helps me keep my phone out of my hand, when at home and trying to relax!

Currently reading

Just finished reading an overview and revision guide for my MS-900: Microsoft 365 Fundamentals Certification – **That I've recently passed!**

First Proper Job

Picking and packing your Tesco online shopping, it's interesting the combinations people order.

Favourite spare time activity

Favorite spare time activity is playing games and messing about with computers – Currently playing Destiny 2 on my custom-build PC.

Claim to fame

Attended an Awards ceremony dinner with Holly Willoughby and Catherine, Duchess of Cambridge.

Soft Skills, Solid Results

Parenting seems unrelated to business, but in my experience, it is very much related to people skills – and people skills are necessary for business. There are four key people skills, often called “soft skills,” that I want to talk to you about:

- Gratitude
- Listening
- Grace By Margin
- Vision

Gratitude

How do you feel when you get a thank-you note? People never forget when they get a handwritten thank-you note. A text or e-mail is nice, but they last a day. People love to feel gratitude. They love to share it and to receive it. Thank-you notes remove barriers, so make it a habit.

Listening

Listen longer and listen better. When you're speaking with someone, encourage long pauses. Let the silence do the heavy lifting. You don't have to rush into an answer or response before thinking about what a person is saying. This is helpful in sales and with direct reports. Allow yourself to stay quiet so the other person can do the talking. Don't be afraid to ask open-ended questions like “How did that go for you?”

Grace By Margin

This is all about things that save you time. Consider using the “while” system as a way to multitask. For example, place an under-the-desk bike to work out while you work at your desk. Another thing to consider: timed e-mails. Schedule an e-mail to be sent out at a specific

time and add links in e-mails to schedule time on your calendar. One more time-saving tool is speech-to-text transcription. This ensures you have a record of every conversation that you can reference as needed.

Vision

Break down your vision into small parts. Instead of feeling overwhelmed by something large, choose one smaller goal for the month. Do this with everyone in your organization. Break down everyone's goals into smaller parts. This makes it easier to track over the course of a quarter or year. Even go as far as creating a vision board. Add images of what you want to achieve. Make your vision visual. Lastly, write down your achievements as part of your vision. Where are you now and where do you want to be over the next three years?

P.S. Don't forget to check out the “Soft Skills, Solid Skills” Petra Coach webinar at PetraCoach.com/soft-skills-solid-results-with-bea-wray.

■ As A Business Owner, Are You Ready For The IT Future?

Over the past year, countless businesses moved to a remote work or hybrid model. It also meant these businesses had to change the way they operate, including a sweeping shift to cloud-based services and a renewed look at their IT security. But despite these changes, many businesses aren't where they need to be. There are still gaps in their cloud infrastructure and security. How do you fill those gaps?

Put a greater emphasis on endpoint security and monitoring. As much as you need solid IT security on your end, every employee needs solid IT security on their end as well. Not only does every device need endpoint security, but you also cannot forget about performance monitoring. This gives you the ability to see threats and potential threats to your network in real time, which means you can react accordingly and stop potential attacks or hardware failures. As

you work with your IT security partner, discuss monitoring options and give yourself one more tool in the protection of your organization. *Forbes, April 15, 2021*

■ 3 Key Ways To Keep Your Business In Growth Mode

1. Talent. You must hire a team willing and able to meet the challenge of growth. You want people who are not only talented in their field, but who also fit within your company culture, who are eager to learn and ready to solve problems, and you have to be just as willing and able to reward them for their talent.

2. Innovation. When you have a talented team at your side, innovation comes easier. You need to continuously develop products and services that customers want to buy. Understand your customers and their problems at the highest level so you can bring solutions to the table.

3. Accountability. As your team and business grow, you must put greater emphasis on accountability. Track everything and have key performance indicators (KPIs) attached to every goal and project. But don't just hold people accountable to meet certain goals – hold them accountable when they succeed; that is to say, make sure the wins are celebrated along the way. *Inc., April 8, 2021*

■ Are You In The Cloud Yet?

Some businesses have tried to avoid the cloud. There are lingering fears that cloud-based services aren't as secure as their non-cloud counterparts. However, cloud services are more prominent than ever, and service providers are fully aware that they must meet the IT security needs of today.

For those businesses still unsure, it's estimated that 97% of businesses already use cloud services. You might not realize it, but cloud services are in the mainstream. Even businesses that are hesitant to join the cloud may already be a part of it. Most e-mail and communication apps are cloud-based. If you use virtually any Google or Microsoft service, you've joined the cloud.

The bottom line is that digital security is top priority for cloud platforms. Not only do these providers need to meet the requirements of their clients, but they must also follow international rules and regulations. If you want to keep your data backed up and secure, the cloud is your answer. *Forbes, April 1, 2021*

"He opened his email and saw the attachment from an unknown source. His hand slowly reached to click on the paper clip. He had no idea what horror awaited him..." #SecurityAwarenessTraining
